

Improving Web Application Performance with ITCAM

presented by MSI Systems Integrators and IBM

Webinar attendees will receive a FREE ITCAM whitepaper from IBM

Web Application Server environments have exploded in size and complexity over the past few years, generally without fine-grained application monitoring tools to diagnose performance problems, and track processes end-to-end. One of the most mature application monitoring offerings on the market is the IBM Tivoli Composite Application Monitor (ITCAM) portfolio.

A recent Forrester Consulting Study has indicated that

- 64% of web application problems take over 4 hours just to isolate
- 36% of those problems are not fixed on the first pass, and
- Very few companies have the systems to dynamically correct web application issues.

How healthy are your business-critical Web applications? Are your administrators struggling to reduce downtime, dealing with memory leaks, heap size limits and JVM recycling?

Join us to learn how you can reduce administration costs and improve service levels for your applications through the use of ITCAM. MSI application monitoring specialists will demonstrate live how web-based applications, transactions, and Portals can be managed and repaired with ITCAM's rich functionality and new intuitive interface.

Webcast Information:

Title: "Improving Web Application Performance with ITCAM"

Day: Tuesday, February, 28 2006

Time: 1:00 p.m. - 2:00 p.m. CST
11:00 a.m. - Noon PST

Dial-in Information:

US/Can: (888) 411-0878

Conference ID#: 3522703

Meeting URL:

<https://www.livemeeting.com/cc/msi2/join>

Meeting ID: MSI-0228

Meeting Key: A3Ee26!T

Presenters:

Scott Auble, Business Integration Solution Leader, MSI Systems Integrators

Scott Lewis, WebSphere Architect, MSI Systems Integrators

Erik Klein, IBM Tivoli Software Product Manager
